                                                                                                                                                                                                                                                                                                                                                Qy
                                                                                                                                                                                                                                                                                                                                                                   The present sequence encodes a Borrelia burgdorferi B313 protein. The CC present invention describes an isolated nucleic acid (I) that: (i) CC encodes a polypeptide fragment (II) immunologically reactive with CC rabbit polyclonal antibody raised against a 13 kDa polypeptide of CC Borrelia burgdorferi B313, but not reactive with most proteins from CC other spirochaetes; and/or (ii) hybridizes under stringent conditions CC to specific nucleic acid sequences but not to genomic DNA from most CC to ther spirochaetes. (I), (II) and transformed cells are useful in CC vaccines to protect against infection by B. burgdorferi sensu lato. CC (I), (II) and antibodies raised against (II) are used to diagnose such CC (I), (II) are also used to produce recombinant (II). The 13 kD protein CC is involved in virulence and is highly conserved within B. burgdorferi CC sensu lato, but is absent from other Borrelia species (e.g. those CC responsible for relapsing fever or avain borrelosis). It should provide CC a more specific and sensitive antibody response, and diagnosis, CC compared with use of whole bacteria as antigen.

CC (I), (II) and antibodies raised against (II) are used to diagnose such cests. (I) are also used to produce recombinant (II). The 13 kD protein is involved in virulence and is highly conserved within B. burgdorferi sensu lato, but is absent from other Borrelia species (e.g. those cresponsible for relapsing fever or avain borrelosis). It should provide CC a more specific and sensitive antibody response, and diagnosis, cxx

The present sequence encodes a Borrelia garinii IP90 protein. The CC present invention describes an isolated nucleic acid (I) that: (i) CC encodes a polypeptide fragment (II) immunologically reactive with CC rabbit polyclonal antibody raised against a 13 kba polypeptide of CC rabbit polyclonal antibody raised against a 13 kba polypeptide of CC other spirochaetes; and/or (ii) hybridizes under stringent conditions CC other spirochaetes. (I), (II) and transformed cells are useful in CC vaccines to protect against infection by B. burgdorferi sensu lato. CC (I), (II) and antibodies raised against (II) are used to diagnose such CC infections, in standard immunoassays or amplification/hybridization CC tests. (I) are also used to produce recombinant (II). The 13 kD protein is involved in virulence and is highly conserved within B. burgdorferi CC responsible for relapsing fever or avain borrelosis). It should provide

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
